Customer /Location	KT. / Chachoengsao , Thailand.
Previous Lube/Fluids	Local Brand.
Materials	Steel Mold.
Process/Machines	Rust Removal and Mold Cleaning
Customer Requirements	Quality Product and Cost Reduction.

Issue/Problems:

- The mold has had deeply embedded rust buildup for many years.
- The customer requires a product that can effectively and easily remove heavy, embedded rust from the mold.
- The rust removal solution must not cause any damage to the steel substrate or aluminum surface.

Solutions:

- We offer Lube-Clean SA20 an innovative rust converter that restores metal surfaces by effectively neutralizing heavy rust without damaging the substrate.

*Clean Surface Ready for Protection.

Summary: Lube-Clean SA20 Trial Procedure.

1. Spray Lube-Clean SA20 onto the rusted areas.
2. Allow the product to react with the rust for approximately 1-2 minutes.
3. Gently scrub the surface with a brush to remove the loosened rust.
4. Rinse with water twice to remove residue.
5. Apply Lube-Kote rust preventive oil immediately to ensure long-term protection.
